AI tools may be used in this assessment. Your use of AI will be assessed across the four 'D' competencies of the AI Fluency Framework.

Please complete column four and submit as an appendix to your assessment . Exemplar below.

AI Declaration using the AI Fluency Framework

AI competence	Reflective prompts (to students)	Lecturer expectations	Student response
Delegation *Deciding whether & when to use AI*	Identify the specific tasks in this assessment where you chose to use AI, and explain your reasoning. Where did AI add value? Where did you decide not to use it, and why?	For this assessment, Generative AI may be used only as a supporting tool for brainstorming and refining ideas, fine-tuning research questions, finding relevant information, drafting an outline, checking grammar, clarity and writing style, and other uses explicitly approved by the lecturer. These uses support planning, research and communication. GenAI must not replace the student's own technical implementation, analysis, modelling, evaluation or interpretation, as these directly assess the learning outcomes. You may not copy and paste GenAI output in your submission. All GenAI use must be declared in the GenAI Tools Declaration (Appendix A).	*AI was used as a tool for support and organization, as well as for obtaining in-depth explanations regarding data structures. I employed it to help evaluate and correlate research articles, using AI to identify specific points within those papers that were relevant to the work I was developing. Furthermore, I used AI to summarize the experimental procedures described in the paper that served as the foundation for my own work—specifically, the study titled "Edge-IIoTset: A New Comprehensive Realistic Cyber-Security Dataset of IoT and IIoT Applications for Centralized and Federated Learning." This enabled me to establish a structure and a starting point for developing the experiments conducted in my own research.*
Description *How you prompted the AI*	Include the exact prompts you used in your appendix (recorded on the AI Tools declaration). Reflect on how you communicated your goals to the AI — did you need to iterate or refine your prompts to get useful output?	Students must provide evidence of prompting for all permitted GenAI use. The exact prompts used, together with relevant links, screenshots or evidence of prompt refinement where applicable, must be provided in Appendix B. Failure to do so is considered to be academic misconduct.	*ChatGPT was used as a tool for gathering information and as a resource for brainstorming. I interacted with it to explore potential topics to address, identify possible datasets to utilize, assess the feasibility of using specific research, and quickly summarize related articles to determine whether they aligned with my research objectives. Given that English is not my native language, this proved to be an excellent way to rapidly grasp the materials I was reviewing. It is also worth noting that I write my texts in Portuguese and subsequently translate them into English, as I feel more comfortable writing in Portuguese; although AI was used to help interpret certain results, I personally authored all the text contained in the notebooks.*
Discernment *Evaluating what the AI produced*	In your reflection (~100 words), critically evaluate the AI output: what did you accept, modify, or reject — and why? Assess accuracy, relevance, and quality. You are responsible for verifying all AI-generated content before submitting.	A reflection is required for this assessment. In approximately 100 words, students must critically evaluate the accuracy, relevance and quality of any GenAI-assisted outputs, explaining what they accepted, modified or rejected and why. Failure to do so is considered to be academic misconduct.	*AI played a significant role throughout the development and brainstorming phases of this project. It assisted in filtering potential articles to serve as a foundation for the research; several were identified, and I selected a topic and a core article that best aligned with my study objectives and areas of interest—specifically, the Internet of Things (IoT). I also utilized AI as a tool to help evaluate my findings. It was instrumental in interpreting the results, clarifying the theoretical underpinnings of concepts I found challenging, and providing deeper, summarized insights into related academic literature.*
Diligence *Responsibility for your AI use*	Declare all AI tools used and cite them here. Briefly outline (~100 words) how you considered data protection, copyright, and ethical responsibilities when choosing what to input into any AI system. Unauthorised use is subject to CCT disciplinary procedures.	Students must declare all GenAI tools used and cite them appropriately. In approximately 100 words, students must explain how they considered data protection, copyright and ethical responsibilities when using GenAI. Unauthorised GenAI use is subject to CCT disciplinary procedures. Failure to do so is considered to be academic misconduct.	*I used ChatGPT as a supporting tool for the development of this work. I made sure to limit the information shared, excluding any personal data or details regarding my availability. I have verified all theoretical information related to the selected articles, ensuring that the original authors of the sources used are duly credited. I acknowledge my responsibility for the final content and for compliance with the institutional policies of CCT College.*
